

J8T-AB Adult Brief Machine

Our J8T Adult Brief Machine combines speed, product versatility and a compatibility to handle future upgrades and retrofits. Some of the main highlights include:

- **Single pad reject** – Creates less waste because the splice only remains in one product instead of multiple pieces.
- **At-speed splicing** – Eliminates the need for web accumulation.
- **Auto-roll loading system (ARLS)** – Our robotic loading system automatically refills the unwinds, eliminating the need for manual loading.

Partnering with Curt G. Joa, Inc.

FEATURES

Machine Features

- Single pad reject
- Shorter web paths
- Automated raw material loading system (capable)
- Production data collection
- Acquisition layer side detection and inversion
- Automatic cuff-fold correction
- Flexo printing capable

Product Features

- Multi-piece product design
- Hook or tape closure capable
- Single or dual core
- Discreet or continuous absorbent cores
- Air-laid core
- Core wrap
- Standing leg gatherers
- Sizes small to XXXL

COMPONENTS

- Joa rotor mill
- Joa formation drum system
- Web-handling techniques
- Joa proprietary vacuum process units
- Full-speed splice of raw materials
- Global safety compliance
- Integration of Siemens, Rockwell and Indramat servo drives
- Vision system integration

FLEXIBILITY

- Integration of customer specified commercial hardware
- Interface to stacker/bagger
- Complete or component sound abatement per customer specifications
- Modular frame design for future retrofits
- Data collection per customer needs
- Rapid change out
